⁴
SPECULUM ANNI
OR AN
ALMANACK

For the Year of our
LORD GOD
1705.

Being the 1st after Bissextile or Leap-Year
and from the worlds Creation 5707.

Wherein is contained an account of several Saints
as they are in the Breviary, the Planets, Eclipses,
Terms both at London and Cambridge, Inclina-
tion of the Air, and other things of note.

Calculated properly for the famous
University and Town of Cambridge where
the North Pole is Elevated above the
Horizon 52 degr. and 12 min.

but may indifferently serve for any Place within
this Kingdom.

Castis qui placeant, non credo quod modo vivat.

CAMBRIDGE,
Printed by *John Hayes*, Printer to the
University, 1705.

The vulgar Notes and moveable Feasts for the

Year 1705, in both Accounts viz,

Julian or
English.

Gregorian or
Forreign.

15	The Golden Number	15		
6	The Dominical Letter	6		
15	The Epact	5		
6	The Cycle of the Sun	6		
Febr.	18	Shrove-Sunday	Feb.	21
April	8	Easter-day	April	11
May	17	Ascension-day	May	21
May	27	Whit-Sunday	May	31
Decemb.	2	Advent-Sunday	Nov.	29

A Table of the Terms with their Returns

Hilary Term begins Janua-
ry 23, and ends February 12,
and hath 4 returns, viz.

Octab. Hilar. Jan.
Quind. Hilar. Jan.
Craft. Purif. Febr.
Octab. Purif. Febr.

Easter Term begins April
25, ends May 21, and hath 4
returns, viz.

Quind. Pasch. Apr.
Tres Pasch. April
Mens. Pasch. May
Quinq. Pasch. May
Craft. Ascen. May

Trinity Term begins June
8, and ends June 27, and hath
4 returns, viz.

Craft. Trin. June
Octab. Trin. June
Quind. Trin. June
Tres Trin. June

Michaelmas Term begins
October 23, and ends Novem-
ber the 28, and hath 6 re-
turns, viz.

Tres Mich. Octo
Mens. Mich. Octo
Craft. Annm. Nov
Craft. Mart. Nov
Octab. Mart. Nov
Quind. Mart. Nov

The Scarlet days in the University of Cambridge, are as followeth.

All Saints, Christmas, Easter, Ascension, Whitsunday,
Trinity-sunday, Commencement, and the 2^d of May;
At the two Fairs proclaiming in June and September;
The Feast of Saint Michael, and the 6th of November,
To Funerals, Clergys and to supplications,
All Doctors go as to Congregations.
That is in their Robes.

To the Reader.

VHereas formerly the right-band Page of this Almanack, was for the most part empty; it shall hereafter be filled with some short account of, or Relation on the several Saints, whose Names fill up the Third of the left-band Page, and which few know any thing and God be thanked that we have not the occasion of know- them, which some have) but yet a little knowledge of them not be amiss to satisfy our curiosity, and let us see what then of Festivals we are delivered from, which others groan under. I will be as brief as I can, and such as not now come within the compass of that part of this Almanack prepared for that purpose, shall hereafter; so that mayst hope to have this small Purchase soon eke'd out Twelve penny worth of History. The Almanacks (I find) in their Saints, and therefore for sureness, and that may be thrust out with a Term begins, or the like; I add some new every year.

Farewell.

Dove 1705.

A brief Concordance of Years with some memorable things
since the beginning of the Reign of Queen Elizabeth.

Anno Dom.	An. Re.	Since

Jan. 3d. Cicero was born on this day, which deserves better to be remembred by all lovers of Learning, than what some will tell you of. *St. Meliorus*, who was Son to *Melianus* Duke of *Cornwall*, his brother was a Pagan, and either in hatred to his Faith or Love to his Estate murdered him, says the *E.M.* but I cannot forgive this Author, nor *Mr. Gressy* for leaving out the best part of the story, and such an instance of charity, as is scarce to be met with, for his brother being very thirsty, after the pains he had taken in cutting off his hands, feet and head, the poor head was so kind as to bid him thrust his staff into the ground and he should find water, and I do as verily believe he did so, as that, that the head spake. Which I leave *Mr. Capgrave* to answer for.

Jan. 13. St. Veronica, A great penitent as we may judge by the tears she shed, which were so valuable, that an Angel gathered up as many into a vessel, as weighed 2 pounds, saith *Bollandus*. And as a reward for the pretious tears, either the same Angel or another taught her the *Roman* office. Some will tell you, that this was the woman whom our Saviour cured of the issue of blood, and that she gave him a Hankerchief to wipe his face, when he went to the Cross, on which the lively Representation of his face was left, &c.

Feb. 1. *St. Severus*, a great Saint, as you may guess by this instance, as he was in a journey, he heard a poor widow bewailing her self for this accident, that as she was preparing a great batch of bread and putting it into the Oven, before she had done, she let the Peel lie too long in the Oven, and it was quite burnt, so that she could neither put in the rest, nor take out what she had put in, our Saint (it seems) was so kind as to go himself into the Oven, and there take in and hand out the bread, till all was finish't, and then came out of the Oven, without the least hurt upon his body, or singe upon his clothes.

4. *St. Gilbert*, he is said to have founded 13 Monasteries for the order of the *Gilbertines*, and was buried in one of them at *Semperingham* in *Lincoln-shire*, where he had 700 Brothers and 1100 Sisters, *E. M.* He was once near dead of a Quinsie, and when near quackled, the Virgin *Mary* appeared to him, and told him it were ill done if that throat, which had so often gladdened her, should suffer pennance, and thereupon took out her breast and milked on his throat, whereupon he was presently well, and ever after thanked our Lady, and had he not cause?

March 1705.

The Latter Aet the 22d. day.

Cambridge Term ends the 30th. day.

Suns setting
and

18 6 March. 2. St. Chad, Bp. of York, 664. a vc-
16 6 ry good man, but put out to make way for
14 6 Wilfred, who was earnestly endeavouring to
12 6 bring in the Roman Tonsure, and observation
10 6 of Easter, which drove away many excellent
8 6 persons from our Church till a stop was put
6 6 to it by the famous Theodore (see Septemb. 19.)
4 6 I wonder how E.M. comes to put him among
2 6 his Saints, for I find nothing that he suffered,
0 7 but only for his being a good Champion a-
58 7 gainst the innovations of the Church of Rome;
56 7 and if that will qualifie men to be Saints, I
54 7 can (for one good word) help him, or any
52 7 friend of his, to enough to fill up another
50 7 Volume, and make a much better and wiser
48 7 book then his first. This Chad was afterward
46 7 made the first Bp. of Litchfield; and when
44 7 the Lord Brook in the late Rebellion advan-
42 7 ced towards this City, and out of great zeal
40 7 to destroy that Cathedral Church, prayed
38 7 that God would by some token approve his
36 7 attempt, a bullet from that steeple, and upon
34 7 this very day shot him dead.

April. 1. St. Sadoch and Adrian, two Irishmen, who went into France to preach the Christian Faith, where they lived to old age, and then died: the French have been so grateful to them, for the good service they did them, that they have kept their relics ever since in the Monastery of Pontoyse, says E. M. and if any Catholick won't believe him, let them but go on this day, and they may be further satisfied.

2. Mary the Egyptian, or as she was called the penitent, I love to encourage all penitents, but some have such an odd way of repenting as is it self to be repented of, such was that of this woman, who for 47 years wandered up and down in the wilderness stark naked, using a very slender diet, for she had but 3 loaves all that while. If her Confessor was a young man, some leering Hereticks would be apt to think, that he follow'd her to observe whether she did punctually perform what he had enjoyned her.

3. It was on this day that Christ did eat the Jewish Passover, and instituted the Christian Eucharist.

2. St. German, was born near *Paris*, of good family, sent to study the Civil Law at *Rome*, for which he was afterwards very famous. When the *Pelagian* heresie began to spread here in *England*, they sent into *France* for some to come and oppose it here, as they had done with good success there, and this *German*, and *Lupus* another Bp. of great reputation, who met the *Pelagians* at *St. Albans*, where they disputed with them, to the great satisfaction of the hearers, and left the *Brittains* well settled in the truth : but when they were gone. the *Pelagians* got ground again, whereupon *German* returned, and so far prevail'd, that he got them all banisht, and from thence our people continued Orthodox, and to keep them so he instituted Schools of Learning; He also brought with him the *Gallican* Lyurgy, which he had learn't in the Monasteries of *Lerinsa*, and from whence it is probable, we had our Observation of Easter, and some other things different from the usage of *Rome*, which when *Anstin* the Monk would have altered, it caused vast disputes and troubles, which yet he promoted notwithstanding he had consulted the Pope in this case, who advised, that he should observe that service which was most proper for the *English*.

June 20. *Silverius*, Son of Pope *Hormisdas*,
Platina saith Son of Bp. *Hormisdas*, that is, he
was got by him while his father was but a
45 9 Bp. this some perhaps may be angry at, but
45 9 truly I cannot give a better reason why *Pla-*
43 9 *tina* should say Son of Bp. *Hormisdas*, rather
44 9 then Son of Pope *Hormisdas*; of this mans co-
44 9 ming in Pope, the same Author takes notice
44 9 that it was not by Authority of the Empe-
43 9 rour, but of *Theodatus* King of the *Goths*, a
43 9 thing that had not been done before, for be-
43 9 fore that time, the Emperours used to make
43 9 the Popes, and sometimes to unmake them
43 9 also, that is, turn'd them out, as he did this
43 9 good man, (as *Platina* calls him, though the
43 9 Pontifical says he came in by bribery) and
43 9 *Vigilius* was put in his place by *Bellisarius*,
44 9 at the Emperours command, whom the Cler-
44 9 gy presently chose and consecrated, without
44 9 so many scruples as some in our days do make,
45 9 some indeed did not consent to this election,
45 9 but even they did subscribe to be obedient to
45 9 him, for the peace of the Church, and the
46 9 good of Religion; some endeavours were u-
46 9 sed to restore *Silverius*, but *Vigilius* told them
47 9 plainly, that if he returned he should not be
47 9 able to pay the money he promised; at last he
48 9 got his brother Pope into his hands, and took
49 9 an infallible course to prevent his troubling him
50 9 any more, for he sent him to *Palermo*, and there
51 9 he was starved; and is not this a fine way that
53 9 some have to make Martyrs?

July 1705.

The 3 day is Commencement Tuesday.

Cambridge Term ends the 6 day.

July 3. On this day Anno 324. was fought

the battle between *Constantine* the Great, and
Licinius his brother in Law, and a partner
with him in the Empire, *Constantine* (it seems)
was a great favourer of the Christians, but
Licinius took all ways to oppress and discour-
age them, and though he did not openly per-
secute them, yet he made such steps towards
it, that *Constantine* thought it a good and pi-
ous thing to prevent it, by making War upon
him, in which war when he had overcome
him, he sent him to live a private life, but
he could not be quiet.

2. *Endock* the 3d. Bp. of *Landaff*, of Noble
family, did miracles both alive and dead, says
E. M. but surely he is afraid they will not be
believed, or else he would out with them,
but that you may guess at the rest, I will tell
you one of his miracles, in his travels he beg-
ged water of some women that were making
butter, they said that they could not give
him any because they had no dish, he then
desired that they would let him make use of
their butter instead of a dish, and making it
into the form of a Bell, he drank out of it,
and it remained in the form of a golden bell
and was preserved as a sacred Relict in the
Church of *Landaff*, Capg.

August 1705.

August 5.

August 5. *Oswald* King of Northumberland, who was slain by *Penda* in *Shropshire*, from whence the place is called *Oswald's Tree*, now *Oswistry*; as he was once at dinner with *Aidan*, a silver dish was brought before him full of dainties, he caused it to be broken in pieces and presently distributed it to the poor, and that his hand remained uncorrupt till the time of *Bede*; and that he finished the brave Cathedral at *York*, is that *E. M.* can find for his Saintship; now tho' we do not pretend to make Saints, yet we can tell better things of him than this comes to, such as his being lowly towards all, bountifull to strangers, kind to the poor, and particularly for his great concern to propagate the Christian Religion in his Kingdom; for which purpose, he sent for *Aidan* (from *Scotland* in *Ireland*, where himself had learn't the Christian Religion) that he might preach it to his people, and when they could not understand *Aidan's* language, he himself did publicly interpret it to them, which added great force to the others good preaching, all which did more to the conversion of the *Saxons*, than *Austin's* great pretences and sly designs; so that we are told of 1500 that received Baptism in the space of one week, and so successful was he that for his further encouragement, he gave him great possessions for founding religious Societies and Schools in this Kingdom.

Septemb. 19. Theodore Arch-Bp. of Canterbury 668. where he sat 22 years, he was born at *Tarjus* in *Cilicia*, and had the Tonsure of *St. Paul*, a pretty business to be recorded as if because *S. Paul* at one time, and in compliance with some sort of *Jews*, shaved his head, therefore Christians must keep particular Modes of being shaved, nay so nice were they in this business, that he could not be consecrated Arch-Bp. though we were in great want of him, till his hair was so grown again, that he might receive *S. Peter's* Tonsure, perhaps *S. Paul's* might have served us as well, of whose preaching amongst us, we have better assurance, then of *S. Peter's*; what tho' *Chriss* was crowned with thorns? what tho' *S. Peter* was once in derision shav'd? what tho' *Nicholas* Bp. of *Treves* when he was newly born, had a mark on his head as if he had been newly shav'd? yet this being a thing forbid to the *Jews* (excepting only the *Nazarites*) and being a fashion among the Priests of *Ips* and *Serapis*, and affected by *Simon Magus*, are as good arguments against it, as any I have seen brought for it, and yet the introducing of this, was the great business of *Austin* and *Wilfred*, and prevented the good they might otherwise have done.

October 4. *S. Francis*, born at *Assise*, bred up among loose young men, and intangled in worldly affairs, and yet if you'll believe the Breviary, he did not transgress one jot or tithe of the Gospel; an affection so contrary to what the Scripture says of the best men, that after this you must wonder at nothing that is said of him, he instituted 3 Orders, one of men, called *Minorits*, from their humility, some of these were planted near *London*, and gave name to the place now call'd the *Minors*. The second Order was of poor Gentlewomen. the third of penitents, consisting of both Sexes; they professed poverty, but were very far from it, as *Chaufer* has wittily exposed them, and he might well do it, for living amongst them, he knew them thoroughly, and asks them many a scurvy question which won't easily be answer'd, and yet his Rule is stil'd the book of life, the marrow of the Gospel, the ladder of Heaven, the Key of Paradise, and every word inspired by the Holy Ghost, if you'll believe *S. Bridget*, or *S. Francis* himself, who when the Pope said his Rule was too strickt, he said there was not a word in it but what was dictated by Christ himself, and then the Pope confirm'd it.

November 1705.

The Vice-Chancellour lays down his Office the 3^d day.

November, In this month it is said the Flood began.

1. *All Saints*, this Feast was fixed on this day by *Lewis* the fair *Anno* 833. On this day, (as we are told in the Festival) our prayers will be sooner heard then on any other, (for this wise reason) because on this day, all the Saints in heaven have a general meeting to pray to God for us, and therefore we may be well assured, that when they altogether pray for us, we shall be sooner heard, then if they prayed singly and by themselves: But I pray who told them that they all joyned together on this day rather then any other? I wonder whether they prayed altogether before this day was instituted by *Lewis*? and how could he know it without a particular Revelation? or were they so civil as to alter their meeting upon his setting this day apart for their honour.

December 1705.

Cambridge Term ends the 16 day.

Decemb. 3. *Lucius* the first Christian King of *Brittany*, Anno 169. some indeed question whether there was such a man, but should I be so scrupulous, I should perhaps not only lose him, but many others, who have already, and may hereafter help to fill up this book. This *Lucius* being instructed in the Christian Religion by *Eluan* and *Edwin*, two *Cambridge* Doctors, whom he sent to *Rome* to receive from thence confirmation in the Doctrine which they had preacht to him from the agreement of that Church, which indeed had had the happiness by being in the Imperial city to be renowned throughout the world, I wish she had wisely made use of it, and instead of raising her pretended Supremacy upon it, have done that good which it might have put into her power; the Pope received these Messengers kindly, and sent back with them *Damianus* and *Faganus*, and by them a Letter to the King, in which he styles him the Vicar of God, the highest King, and appointed to honour the holy Church and rule it, which Letter is still to be seen, and may rise up in judgement against them who have since altered this way of treating Kings, and making them their own Vicars and Substitutes; what if the Pope had by his Missionaries converted our King or any other, must they therefore be his Subjects and Vassals, no more surely then our Kings may pretend to be Kings of *Bavaria* and *Rhetia*, because our King *Lucius* went and preacht the Gospel in these Countries.

For the year of our
Lord God 1705 :

Being the 1. after Bissextile or Leape year

Wherein are contained the Eclipses,
the Suns entrance into the 4 Cardinal Signs.
A Tide-Table, and a short Discourse of the
Nature of the Planets, as also how to judge
what Weather is likely to follow by the Sun,
Moon or Stars, &c. A Table of Weights
and Measures both *English* and Foreign, and
of Foreign Coins, also Tables of Reversion
for Renewing and Purchasing of the Leases
of Cathedral Churches and Colleges, with
other useful Things and Tables.

*Quoniam videbo Caelos tuos opera digitorum tuo-
rum: Lunam & Stellæ quæ tu fundasti, quid est
homo, quod memores ejus? aut filius hominis, quo-
niam visitas eum, Psal. 8. 3.*

Printed by *John Hayes*, Printer to the
University 1705.

Dove 1705.

The Eclipses for the Year 1705.

THis Year 1705. will happen two Eclipses and those both of the Sun.

The First Eclipse of the Sun will happen on the Eleventh of *May*, the beginning whereof will be about the time of our Sun-setting for which reason it will not be visible to us here in *England*; but will be a great Eclipse to those that inhabit the Southern parts of the World.

The Second defect of the greater Lumina will fall upon the 5th. of *November*, which will be also invisible to us in *England*: But it will be a great Eclipse of the Sun to the farther parts of *France*, and in *Spain*, and to the most remote Southern Countries.

The Sun's entrance into the four Cardinal Signs

HE enters γ , *March* the 9th, 5 min. past 7 at night, and then begins our Spring Quarter.

He enters σ , *June* the 10th, 28 minutes past 11 at night, and then begins our Summer Quarter.

He enters ζ , *September* the 12th, 36 minutes past 11 in the morning, and then begins our Autumn.

He enters π , *December* the 10th, at 11 min. past 11 at night, and then begins our Winter Quarter.

The Tide Table Explained.

The first Column you have the point of the Compass
at which the Moon coming maketh full Sea at
the Havens mentioned in the second Column, and in
the third Column are the hours and minutes to be added
to the time of the Moons southing. I shall make it plain
by example.

Dove 1705.

The 23 of February this Year 1705. I would know what hour it will be Full Sea at London-bridge. I find the Moons age in the former part of the Almanack (accounting it from the Change) to be 20 days old, age I find at the bottom of the Tide table, and under same 4 hours, is the time of the Moons coming South, then finding in the first Column that a South Moon makes full Sea at London, I add to her four hours, as is shewed in the last Column, and it is seven hours at night, the time of full Sea at London-bridge; also observe that when the Moon cometh contrary, or North-east point, it is there full Sea again.

Note, that Land floods, Spring-tides, and contrary make it sooner or later about an hour.

Supposing that there are some that do not understand the Parts of the Body, that is governed by the several Signs, I thought it not amiss to explain a little the meaning of the Signs, viz. in the fifth Column on the hand page in the former part of this Almanack.

Aries, head and face, *Taurus*, neck and throat, *Cancer*, breast and stomach, *Virgo*, bowels and belly, *Scorpio*, members, *Capricorn*, the knees, *Gemini*, arms and shoulders, *Leo*, heart and back, *Libra*, reins and loyns, *Sagittarius*, thighs, *Aquarius* the legs, *Pisces* the feet.

For the better understanding of the sixth Column I have serve the Characters of the seven Planets; ♀ Saturn, ♀ Jupiter, ♂ Mars, ☉ Sol, ♀ Venus, ☿ Mercury, ☽ Moon. The five Aspects, ☿ a Conjunction, ✱ Sextil, ☿ Tril, △ Trine, ☿ Opposition, as also ☉ Dragons head, ☿ Dragons tail.

The signification of the Characters.

☿ A Conjunction, is when two Planets or fixed Stars are in the same Longitude of the Ecliptick.

I would know

Sextile, when they are asunder two Signs, or 60 degrees, which is the sixth part of the Ecliptick.

Quartile, when they are asunder three Signs, or 90 degrees, which is a quarter of the Ecliptick.

Trine, when they are distant from each other 120 degrees, or the third part of the Ecliptick.

Opposition, when they are right opposite one to other, or are distant 180 degrees.

in ♉ Dragons head, or ♏ Dragons tail, is at the time in the Ecliptick.

The Apogæon of the Moon, or Planet, is when they are in the slowest motion, or at the highest distance from the Earth.

The Perigæon of a Planet. is when it is in its swiftest motion, and at the nearest distance from the Earth.

Dragons

Jupiter is cold and dry, melancholick, and an enemy and destroyer of the Nature and Life of man, of the Masculine evil, and the greatest misfortune.

Venus is hot and moist, Sanguine, a friend and preserver of the life and nature of man, Masculine, and of Fortune, and is called the greatest Fortune.

Mars is immoderately hot and dry, Cholerick, Masculine, and of the night, evil and the less misfortune.

The Sun is moderately hot and dry, Masculine, and of the day; fortunate by Aspect, but unfortunate by corporal conjunction.

The Moon is cold and moist, temperate, flegmatick, Feminine, and of the night, of good nature, and is called the least Fortune.

Mercury is in all things common and imitable, he is mixed with the Good, and Evil with the evil, with the Masculine he is Masculine, and with the feminine he is Feminine, Hot with the hot, and Moist with the moist, Infortunate with the unfortunate or misfortunes, and fortunate

atters.
ts or fixed
.

unite with the fortunes, especially when he is joyntly corporally applying unto them, or beholdeth them in some good Aspect.

The Moon likewise is cold and moist, and albeit she doth heat a little, yet she doth moisten more: she change her nature and quality according to the quality like as the Sun doth throughout the signs of the zodiac, and the quarters and parts of the Year; also Feminine, of the night, and Hegmatick, and she to us all the Virtues and impression of the other Planets for all the influence of the higher Bodies, passing through her Circle, come finally to us.

The Head of the Dragon is in all parts like Mercury, good with the good Planets, and Evil with the evil, for being joyned with good Planets, he doth increase their goodness, and with the Evil their malice.

The Tail of the Dragon is contrary to the Head, he is Evil with the good, and Good with the evil, so that he doth diminish the malice of the evil Planets, and hinders the Goodness of the good.

How to judge what Weather will follow, by the rising and setting of the Sun, &c.

THE Sun rising bright and clear, signifieth a fair day. If it rise fiery red, it promiserh Rain, if at his rising he is overcast with a cloud, it betokeneth stormy weather. Moreover, if at his Rising, it seem greater than at his setting, it sheweth that there will be a shower that will produce Rain. If at the Rising of the Sun his beams seem red, or long, or compassed with red, it foresheweth Winds and Rain. If the Sun after his rising be quickly hid behind a Black cloud, or if Vapours be seen to ascend up to it, it is a sign of Rain that doth follow. If the Sun drive the clouds before him into the West, and look bright it betokeneth fair Weather. If at his

appear a Circle about him, and vanisheth away e-
 or if Mists come down from hills, or seem to de-
 from the Sky, it foresheweth fair Weather. If at his
 he be of divers colours, and there appear a thick
 cloud in the West, it threatneth Rain very soon af-
 If there be any circles, it signifieth Wind. If the
 are here and there broken, and are thick and black,
 or cold Winds or Snow, the redder the circles are
 are vehement Winds.

How is Weather foreknown by the Moon.

The Moon the third day after her Change, or three
 before her Full, or in the midst of her Quarter
 and of pure Light, nothing encompassing her, the ends
 up, she promitteth fair weather; but bent to red co-
 provoketh Winds. The Moon pale or blackish, or
 that thick, or having a circle about it the fourth day
 the Change, or if the Tipps of her Horns be blunt,
 thicker then ordinary, it presageth Rain: If sharp and
 up upwards winds.

Of the Judgment of the Weather by the Stars.

As observed, that if the Stars appear more bright,
 seem to blaze, and are bigger then ordinary, that
 winds, and much moisture will follow, in those parts
 they seem to be so: and in winter when they look
 refaid, great Frosts ensue, and cold Weather. Also
 dim stars appear, with long fiery Tails, it threat-
 Winds and Drought, the more in number the greater
 be the Effect. Likewise when stars seem to shoot and
 it signifieth great Winds in that place: If they shoot
 ers places, it sheweth divers winds. If in all places
 is. Thunder and most tempestuous weather followeth.

Of divers Cities out of England, how
their Day is there, and how far they
off from London.

Virginia, Their longest day is 14 Hours and 28 minutes
it lieth West South-west, 3650 miles from London.
Babylon, their longest day is 14 Hours and 14 minutes
is East South-east, 2710 miles from London.

Jerusalem, their longest day is 14 Hours and 14 minutes
it lieth South-east by East, 2320 miles from London.

Constantinople, their longest day is 15 Hours 24 minutes
it is East South-east, 1480 miles from London.

Rome, their longest day is 15 Hours 4 minutes,
South East, 896 miles from London.

Lisbon, their longest day is 14 Hours 44 minutes
is South South-west 776 miles from London.

Geneva, their longest day is 15 Hours 34 minutes
South east, 440 miles from London.

Dublin, their longest day is 16 Hours 44 minutes,
North-West and by North, 290 miles from London.

Edenborough, their longest day is 17 Hours 23 minutes
it lieth North North west and 286 miles from London.

Paris, their longest day is 16 Hours 2 minutes, it
South-east and by South, and 240 miles from London.

In all which Places aforesaid, their longest Day differs
not much from our longest day in England; Albeit
must understand, there are some places where their longest
day is in length as long as many of our days and months
together. And elsewhere, their day lasteth half of the
together, without any night, and the other half of the
is all night. Yet here the old proverb is verified:
longest day and night will have an end. And therefore
will heartily, that all men would remember, that what
soever they take in hand will have an end also, and that
by they should be wary of doing amiss, for *Ultima
per expectanda dies.*

Due is to be given for 7 Years run out) so that the
 e for renewing 7 years Lapsed according to this rate
 interest, is 1 year, 1 month, and 2 week's value:
 e third part of the Table being calculated at 6lb.
 cent. the fine for renewing 7 years Lapsed is 2 years,
 quarters, 1 month, and 2 week's value: and so as the
 e of interest decreaseth, the fines both for Renewing
 Purchasing increase.
 In a Lease for 10 years, they usually give 1 years
 ue for 4 years Lapsed, and then the Tenant hath
 lb. & sh. per cent. profit for his money, as the
 ble shows; but if he gives 1 year, 3 quarters
 months, 2 week's value to renew the same, he hath
 10lb. per cent. &c. so the value of a Lease for
 years at 17 lb. 5 sh. per cent is 4 years 2 quarters,
 months, and 1 week's purchase; but at 6lb. per
 cent.

Dove 1705.
